SAAS PLATFORM ADMINISTRATORS
(i.e., Hart Operations)

1. Authentication

1.1 Sign In

- **Assumption**: Hart Ops staff cannot register. They have to be invited by existing Hart Ops staff. The first Hart Ops staff member will be registered by Ambar directly into the backend.
- **Flow:** User receives invitation email with activation link > link directs to web platform
- **Elements:** Email field (pre filled from invitation), password field, confirm password, activate account button
- **Functionality:** Valid email format required, password security requirements, passwords must match, error message displayed if requirements are not met.

1.2 Sign in

- **Elements:** Email field, Password field, "Forgot Password?" link, Sign In button
- **Functionality:** Valid email & correct password accepted otherwise error message will display

1.3 Forgot Password

- **Elements:** Email field, "Send Reset Link" button
- **Next:** User receives email and redirected back in platform
- **Elements:** New password, confirm password
- **Functionality:** Valid emails accepted, password should have basic security measures + password matching, if requirements are not met, error message will display
- **Next:** Sign in Screen (see above)

2. Navigation

- **Assumption**: When a Hart Ops member first logs in, they land on the Dashboard (homepage)
- **Side Navigation**: Dashboard (default/active on login), Organizations, Events, Reports, Settings
    - Dashboard: Quick stats, upcoming events, recent activity
    - Organizations: Sets up orgs, manage users in orgs
    - Events: Overview of events running
    - Reports: Overview to track progress
    - Settings: Profile, Invite Hart Ops, Logout

3. Dashboard (Homepage)

- **Elements:**
    - Stat Cards: Total Organizations, Total Active Events This Week, Top Organizations, Recent Events, Platform Growth (statistics plotted across dates, grouped by week)

4. Organizations

Assumption: All Hart Ops will have access to the list of organizations and relevant details

4.1 Navigation & Overview

- **Elements**: List of existing organizations (name, number of events), add organization CTA, search bar

- **Functionality**: Search organizations to filter, clicking on an org card directs the user to that that org's details page

4.2 Add Organization

Step 1: Organization Details

- **Elements**:
    - Required fields: Company name, Logo, Industry dropdown, Primary contact (first name, last name, email, phone)
    - What else? Company address (optional), Website (optional), "Next", "Cancel" buttons
- **Functionality**: Form validation for required fields, email/phone validation

Step 2: Manager Users

- **Elements**: "Add User" button for users (full name, email)
    - This effectively adds ops staff to this organization
- **Functionality**: Can add additional users one after the other, system does email validation and duplicate email check

Step 3: Review & Finalize

- **Elements**: Summary panel (all sections read-only with edit links), "Complete Onboarding" button
- **Functionality**: Edit links return to specific step preserving data, On Completion: creates client (Active status), sends invitation emails, users created (Pending status), redirects to client detail page

4.3 Organization Details Page

- **Elements**: Header (logo, company name, status, contact info, description), Overview (Performance, Campaigns, Events, Team Members)
    - **Performance:** Performance overview (this month stat cards), Performance trend chart, Recent activity
    - **Campaigns**: Campaign list with filters, campaign card showing name/dates/status **-** Each campaign can be selected and pop up will appear with campaign details
    - **Events**: Event list with filters (status, date range, campaign, search), event cards showing venue/date/educator/status/metrics, **-** Each Event can be selected and pop up will appear with event details
    - **Team Members**: Team member table (name, email, role, status, last login), Actions: Resend Invitation, Deactivate/Reactivate. "Add Team Member" button, user count display

5. Events (Overview)

- **Elements**: Summary stats bar (Events Today, This Week, Live Now), Filter bar (Organization, Status, Date Range, Search), View toggle (List), Event cards/rows (Organization, Date/Time, Status, Location)

6. Reports (Overview)

6.1 Reports Dashboard

- **Elements**:
  - **Quick Stats Overview**: Time period selector, Stat cards (Total Clients, Campaigns, Events, Consumers Reached, Sales Generated, Avg Events per Client)
  - **Platform Growth Chart**: Multi-line chart (clients/campaigns/events/consumers), toggleable metrics, time granularity (weekly/monthly)
  - **Top Performers**: Tables for Most Active Clients (top 5), Top Campaigns by Reach (top 5), Top Educators (top 5)
  - **Export Section**: "Generate Platform Report" button with options modal (time period, format: PDF/Excel, sections to include)
- **Functionality**: Time period updates all stats/charts/tables, charts interactive (hover for values), export generates report (downloads or emails for large reports)

6.2 Data Quality Overview

- **Elements**:
  - **Data Quality Score**: Large percentage (platform-wide), based on completeness of photos/questions/inventory, trend indicator broken done by organizations, campaigns & events
- **Functionality**: Data quality auto-calculated based on completeness criteria, export: "Export Data Quality Report"

7. Settings

7.1 Account

- **Elements**:
  - Profile photo upload, Name, Email address (can be edited)
  - "Change Password" link - Opens modal with fields: Current password, new password, confirm new password
  - "Save Changes" button

7.2 Team Management

- **Assumption:** Hart Ops users can invite and other Hart Ops users
- **Elements:**
  - Invite Team Member > name, email address
  - Team member table with columns: (Name, Email, Status (Active / Pending Invitation / Inactive)

Actions dropdown (Resend Invitation, Deactivate)

OPERATING STAFF

(i.e., Ops Staff at the first two trial clients)

1. Authentication

1.1 Activate Account

- **Flow**: User receives invitation email with activation link > link directs to web platform > user lands on activation screen
- **Elements**: Email field (pre-filled from invitation), password field, confirm password field, company name (pre-filled, view-only), 'Activate Account' button
- **Functionality**: Valid email format required, password security requirements (minimum 8 characters, at least one uppercase, one number, one special character), passwords must match, error message displayed if requirements are not met
- **Next Steps**: Redirect to sign-in page with success message

1.2 Sign In

- **Elements**: Select Organization, Email field, Password field, "Forgot Password?" link, "Sign In" button, "Remember Me" checkbox, Company logo (displayed above login form)
- **Functionality**: Valid email & correct password accepted otherwise error message will display
- **Next**: Dashboard (homepage)

1.3 Forgot Password

- **Elements**: Email field, "Send Reset Link" button
- **Flow**: User receives email with reset link > link directs to password reset page
- **Elements**: New password field, confirm password field, "Reset Password" button
- **Functionality**: Valid emails accepted, password must meet security requirements + match confirmation, if requirements are not met, error message will display
- **Next**: Sign in screen with success message

2. Navigation

- **Assumption**: When Trial Client Staff first logs in, they land on the Dashboard (homepage)
- **Side Navigation**: Dashboard (default/active on login), Campaigns, Events, Reports, Brand Assets, Settings
    - **Dashboard**: Campaign performance overview, active events summary
    - **Campaigns**: View, create and manage campaigns
    - **Events**: View, create & manage events (All. I.e., unstarted, in-progress, finished)
    - **Reports**: Access analytics, consumer insights, sales data, download reports
    - **Brand Assets**: Product library, marketing materials, questionnaires
    - **Settings**: Profile, Help & Support

3. Dashboard (Homepage)

- **Assumption**: Dashboard displays snapshot of real-time data for all client's campaigns & events. Note that more analytics is available in Reports
- **Elements**:
    - **Stat Cards** Active Campaigns, Number of events, Consumers Reached, Total Sales Generated
    - **Performance Trend Chart**: Line/bar graph showing key metrics over last 6 months (consumers reached, sales, events completed)
- **Functionality**:
    - Timeframe adjustable (Last 30 days, Last 3 months, Last 6 months, Last 12 months)

4. Campaigns

Note from Ambar: we've made assumptions in the structure of campaigns and events, and can foresee tweaks will be needed once we see thorough details of existing events. Also keep in mind that campaigns are better thought of as groups of events in service of common objectives.

4.1 Campaign Library

- **Assumption**: Shows all campaigns (past and present) created by this client
- **Elements**:
    - **List of campaigns (card view)**
    - **Campaign Cards**: Campaign name, Total events (completed / planned)
    - **Filters**: By name (in the future, we could add things like filter by products or brands)
    - **"Create Campaign" button** (primary CTA, top right)
- **Functionality**:
    - View updates based on filters
    - Clicking on a campaign card directs the user to Campaign Details Page
    - Clicking on 'Create Campaign' directs the user to Campaign creation page
    - Empty state: "No campaigns yet. Create your first campaign to get started."

4.2 Create Campaign

- **Elements**
    - Campaign name field (required)
    - Campaign description textarea (optional, internal reference)
    - "Next: Event Requirements"

4.3 Campaign Detail View

- **Campaign Details**: Campaign name, description, total events
- **Campaign Metrics Overview** (if Active/Completed): Events completed / Total events, Total consumers reached, Total samples distributed, Total sales generated, Average sales per event
- **CTA -** Create event inside this campaign

5. Events

5.1 List of Events

- **Assumption:** List of events will display live events at the top of the list, followed by upcoming then completed events. This section is scrollable
- **Top Navigation Elements:** Search bar, All events, Live events, Upcoming Events, Completed Events, Filter by Campaign, Filter by Location
- **Event Card:** Event Name, Location, date/time, campaign tag, Event Type (on prem, off prem, special)
- **Functionality**
    - Clicking on any of the top navigation filters the list of events below the fold
    - Using the search bar filters the list of events based on the search item
    - Clicking the calendar view changes the screen to show a monthly calendar view with events in the corresponding dates. User can navigate forwards & backwards
    - Clicking on an event card directs the user to event details
- **Report of individual event**
    - As well as details for everything that happened, there are statistics, depending on the information that was collected for this event

5.2 Create Event

Step 1: Event Basics

- Event Name, Location, Date & Time, Duration, Campaign
- Product Section: Selectable from brand assets (more than one)
- Event Instructions: Eg Setup, Parking, Wifi, Materials (freeform text)
- Compensation: Pay rate, event duration (TBC if it's a good idea to include this now here, or later when we start syncing with payroll systems)
- Venue Type. E.g.,
    - Off-Premise Retail (Supermarkets, liquor stores, convenience stores)
    - On-Premise - Bar (Bars, nightclubs, lounges)
    - On-Premise - Restaurant (Restaurants, cafes with alcohol service)
    - On-Premise - Hotel/Resort (Hotel bars, resort pools, conference centers)
    - Special Event (Festivals, sporting events, private parties, pop-ups)
    - Other Venue (Custom)

Step 2: Objectives (required - more than one can be selected):

List TBC, e.g.,

- Brand Awareness
- Drive Sales
- Build Consumer Database
- Competitive Intelligence
- Product Testing
- Market Entry

Plus a field for additional information (e.g., paste an email received from a beverage company asking for more sales).

Step 3: Tentative event report

In step 3, the operator would see a report showing what a concluded event would look like. For example, in the case of market entry, it would have statistics about how many people sampled which products, and their demographics. Or in the case of competitive intelligence, there would be a report of which competitor products exist at a restaurant, and their prices. And the operator would see which data is required and will always be collected, and which data was optional.

The user would then be able to add/remove things they want in the report. E.g., I don't want to ask people for their ages, but I do want to ask them their preferred beer. TBC on the precise interface for this (AI will be our friend if we decided to go freeform, because it will transform unstructured thoughts into structured requirements, which then would modify the tentative event report).

Step 4 (Optional): Direct Editing

If Step 3 isn't enough to get the results the operator wants in a report, the operator can directly modify the mechanics of the event itself.

Elements:

Consumer Engagement Module (always active, adapts to venue)

Toggle: "Passive Counting" vs "Active Profiling"

- **Passive Counting**: Educator just taps +1 per person
- **Active Profiling**: Collect demographics/preferences

If Active Profiling selected, choose level:

- **Quick Profile** (10 sec): Gender, Age range, Rating
- **Standard Profile** (30 sec): + Purchase intent, Usual drink preference
- **Deep Profile** (45 sec): + Brand familiarity

Toggle: "Incentivized Capture"

- Generates QR code for discount/prize in exchange for contact info
- If enabled:
    - **Incentive type** (adapts to venue):
        - **Off-Premise**: "X% off your next purchase"
        - **On-Premise Bar/Restaurant**: "X% off bill"
        - **Special Event**: "Merchandise discount"
    - Discount/prize details: [Enter text]
    - QR code auto-generated
- Consumer scans > landing page > enters name/email/phone > receives email with discount

---

Sales Tracking Module (always active, adapts to venue)

Assumption: Sales tracking is always active but adapts to the venue. Educators will always have the option to add data manually, photo scan or voice record their findings which will be AI analysed.

Examples:

- **Photo Scan**: AI counts bottles in before/after photos
- **Cocktail Count**: Educator logs each cocktail ordered (manual tally)
- **Receipt Verification**: Photograph bar tab/check showing product sales
- **Ticket/Token System**: Track distributed tokens redeemed for samples

---

Venue Intelligence Module (completely dynamic based on venue type)

Note: Based on the venue type, only relevant checkboxes will appear. Client staff simply have to check the data they want to track and the platform will generate the questions/tasks and CTAs

Examples:

Checkbox: "Shelf/Display Analysis"

- **Quick**: Photo of full shelf > AI identifies all brands + estimates pricing + shelf positioning

Checkbox: "Menu Analysis"

- Educator photographs cocktail menu > AI extracts all drink offerings > flags competing brands
- Educator voice note "Menu highlights" (transcribed by AI)

Checkbox: "Bartender Engagement Tracking"

- Quick survey after event: "Did bartender actively recommend product?" Yes/No & "Bartender knowledge level" (Expert/Good/Basic/None)

Checkbox: "Back Bar Analysis"

- Photo of back bar > AI identifies all spirit brands visible
- Identifies: Premium shelf placement, Brand visibility, Competitor presence
- Shelf positioning: (Top shelf/Eye level/Bottom shelf)

Checkbox: "Venue Area Mapping"

- Location within property: (Lobby bar/Pool bar/Rooftop/Restaurant/Room service)
- Foot traffic pattern: [High visibility/Secluded/Moderate]
- Guest type: [Leisure/Business/Conference/Wedding]

Checkbox: "Booth Performance Tracking"

- Event type: (Music festival/Food festival/Sports game/Corporate event/Wedding/Other)
- Line/wait time: (None/Short <5min/Medium 5-15min/Long 15min+)
- Booth visibility: (High/Medium/Low)
- Foot traffic past booth: (Constant/Frequent/Occasional/Rare)
- Competing booths nearby: (Yes/No + photo)

Product Feedback Module (optional, same for all venues)

Checkbox: "Flavor Profile Mapping"

- Swipeable flavor scale: Sweet, Dry, Smooth, Bold

Checkbox: "Comparison Testing"

- "Which did you prefer?" A vs B buttons
- Educator voice note: "Why?" (optional, AI transcribes)

Checkbox: "Open Feedback"

- voice-to-text: feedback (AI analyzes sentiment)

Educator Experience Preview Modal:

- Shows actual mobile screens educator will see
- Interactive walkthrough
- "Edit Configuration" or "Approve & Continue"
- **"Create Event" button**

5.3 Event Detail View

- **Elements**
    - **Pre Event:** Event Details (see above), Collection Requirements (See above)
    - **During Event:** Event Details (see above), live updates based on collection requirements, real time photo uploads)
    - **Post Event:** Event Details (see above), inventory & sales data, aggregated consumer data, notes, photos uploaded
- **Functionality**
    - Pre Event elements can be edited before the event starts.
    - Ability to download photos
    - Ability to export event data

6. Reports

6.1 Report overview

- **Elements**:
    - **Quick Stats Overview**:
        - Time period selector (This Month, Last Month, Last 3 Months, Last 6 Months, Last 12 Months, All Time, Custom Range)
        - Stat cards for selected period:
            - Total Campaigns
            - Total Events
            - Total Consumers Reached
            - Total Sales Generated
            - Average Sales per Event
            - Conversion Rate
    - **Performance Trends Chart**:
        - Multi-line chart showing trends over time
        - Metrics: Events, Consumers, Sales (toggleable)
    - **Campaign Comparison Section**:
        - Table comparing campaigns side-by-side
        - Columns: Campaign name, Date range, Events, Consumers, Sales, Conversion Rate, Status
        - Select campaigns to compare (opens detailed comparison view)
    - **Generate New Report Button** (primary CTA)

7. Brand Assets

7.1 Product Library

- **Elements**: List of Products, Add Product CTA
    - **Product Grid/List**:
        - Product cards displaying: Image, Name, Brand, Status (Active/Inactive)
        - Filter: Brand, Status, Search bar
    - **Add Products**:
        - Manually
            - Product name (required)
            - Brand dropdown (required)
            - Product description (optional)
            - Product image upload (required, JPEG/PNG, max 5MB)

            - Status: Active/Inactive (default Active)
            - "Save Product" button
        - Auto
            - Staff uploads folder of content and the above detail are prefilled
    - **Edit Product**: Same modal, pre-populated with existing data

7.2 Questionnaire Templates

- **Assumption**: Library of saved questionnaire templates for reuse across campaigns & events
- **Templates List**: Consumer templates, educator templates
        - Template cards displaying: Template name, Template Type Number of questions, Last used date, "Use Template" button, Actions (Edit, Duplicate, Delete)
        - Clicking on a template card opens the questionnaire that a user can then edit
- **Functionality**:
    - **Create Template**:
        - Select type (consumer / educator)
        - Opens questionnaire builder (same as campaign creation section 4 & 5)
        - Save with template name
    - **Edit Template**:
        - Opens questionnaire builder with existing questions

8. Settings

8.1 Account

- **Elements**:
    - Profile photo upload, Name, Email address (can be edited)
    - "Change Password" link - Opens modal with fields: Current password, new password, confirm new password
    - Enable Email Notifications (weekly events list “Whats happening this week”)

8.2 Team Management

- **Assumption:** Client Staff users can invite other Client Staff. Educators and Educator Managers
- **Elements:**
    - Invite Team Member > name, email address, role (Staff, Educator, Educator Managers)
    - Depending on the role, the user will be invited to the mobile app or web platform
    - Team member table with columns: (Name, Email, Status (Active / Pending Invitation / Inactive), role
    - Actions dropdown (Resend Invitation, Deactivate)

8.3 Help Resources

- **Assumption:** Client Staff can create and manage FAQs and resource links that appear in the Help section for their Educators and Educator Managers.
- **Elements:** FAQs collapsible accordion per question & answer
- **Functionality**
    - Add question
    - Edit question & answer
    - Delete question

- Assign question to educator or manager roles - will then appear for all those users types.

EDUCATORS

1. Authentication

1.1 Activate account

- **Assumption:** A user cannot register in-app. They have to be invited via email by Client Staff.
- **Flow:** User receives invitation email with activation link > link directs to app (deep linked rom app store if not installed) > user lands on activation screen
- **Elements:** Email field (pre filled from invitation), password field, confirm password, ‘Activate Account’ button
- **Functionality:** Valid email format required, password security requirements, passwords must match, error message displayed if requirements are not met.
- **Next Steps:** Settings permissions pop-ups (in order) - allow biometric login, allow geolocation, allow notifications

1.2 Sign in

- **Elements:** Email field, Password field, "Forgot Password?" link, “Sign In” button, Biometric option (Face ID/Fingerprint)
- **Functionality:** Valid email & correct password accepted otherwise error message will display
- **First time users:** After first successful sign-in, if not done during activation, prompt permission settings (biometric login, geolocation, notifications, photo)

1.3 Forgot Password

- **Elements:** Email field, "Send Reset Link" button
- **Next:** User receives email and redirected back in app
- **Elements:** New password, confirm password
- **Functionality:** Valid emails accepted, password should have basic security measures + password matching, if requirements are not met, error message will display
- **Next:** Sign in Screen (see above)

2. Navigation

- **Assumption:** When a user first logs in, they land on the Events page (homepage).
- **Bottom Navigation:** Events (default/active on login), Settings.
- **Events:** Upcoming Events, Past Events, Event search bar. Scrollable list of events
- **Settings:** Profile, Help, Notifications, Geolocation, Biometrics
- **Future-Proofing Note:** Navigation is designed to accommodate additional tabs as the app grows (e.g., Performance, Earnings, Training).

3. Events (Homepage)

3.1 List of Events

- **Assumption:** Co-ordinating of events happens outside of the app (accepting, cancelling etc)
- **Elements:** Two tabs (Upcoming events - default active & Past Events)
    - Assigned Events List: Scrollable list of event cards
    - Event Cards display name, location and time & date
    - Events Sorted by date/time
- **Functionality:** Each event card can be clicked on to navigate users to the event details page. Dynamic status based on time & location (not started (pre event), check in available & in progress (live event), completed (post event). List of events updates in real time.

- **Live Event:** If event is currently live (or within 1 hour of go-live) the user will see a 'Live' Indicator
- **No Events:** If no upcoming or past events are available, relevant text will be displayed

3.2 Pre Event Details

- **Assumption:** Available from the homepage as soon as activated. Read only.
- **Elements**
    - Top Section: Event Name, Location + get directions link, date/time + add to calendar link
    - Product Section: Product Images & details (collapsible)
    - Event Instructions: Setup, Parking, Wifi (collapsible)
    - Event Kit/Materials; Pickup details, list of materials required (collapsible)
    - Event Goals: Number of samples/sales/focus area (collapsible)
    - Compensation: Pay rate, event duration
    - Contact Info; Educator manager & Store/Bar manager etc
- **Functionality:**
    - Top Section is always expanded, even as user scrolls
    - Other sections are collapsible/expandable
    - Location - clicking this opens up default map app
    - Date & time - clicking this will open up default calendar app
    - Contact - clicking on number will auto call

3.3 Live Event Details

Always available:

- Event name, time & date
- Countdown timer: "2h 15m remaining"
- Progress indicator: "4 of 7 tasks complete"

Assumption: Each cta is a single-tap entry point to a full-screen, focused workflow. Cards appear only if client enabled that feature.

If client selected: Passive Counting

- **Card displays:** counter with -/+ buttons

If client selected: Active Profiling (any level)

- **Display:** "Sample Consumer" CTA button, Current count "24 sampled"
- **Interaction:** Tap card > Opens full-screen sampling flow
- **One page experience:**
    - Tap gender (3 large buttons)
    - Tap age range (4 large buttons)
    - Tap emoji rating (5 emojis)
    - Tap purchase intent (3 buttons)
    - Counter auto-updates

Sales Tracking Card (Only if enabled, adapts to venue)

- **Display** "Track Inventory" CTA button
- **Interaction:** Tap card > Opens full-screen camera experience
- **Full-screen experience:**
    - Camera opens with AR overlay showing bottle detection
    - AI counts bottles in real-time: "Detected: 24"
    - Tap capture > Confirms count > Returns to dashboard

Venue Intelligence Card (Only if enabled, adapts to venue)

Example If venue = Special Event

- **Display:** "Event Check" CTA button
- **Interaction:** Tap card > Opens full-screen assessment
- **Full-screen experience:**
    - Single screen with large buttons:
        - Crowd size: Small, Medium, Large, Very Large
        - Energy: High, Medium, Low
    - Tap selections > Take crowd photo > Done > Returns to dashboard

---

Product Feedback Card (Only if enabled)

- **Display:** "Detailed Feedback" CTA button, Counter "0 collected"
- **Interaction:** Tap card > Opens full-screen feedback flow
- **One-page experience:**
    - Flavor sliders (swipe to position: Sweet > Dry)
    - Comparison (if enabled): [Product A] vs [Product B] buttons
    - Screen 3: Voice note → [Hold to Record] → AI transcribes
    - Swipe through or tap Done > Returns to dashboard
    - Counter increments: "1 collected"

QR Code (Bottom Navigation - Only if enabled)

- **Button:** Center of bottom nav, always accessible
- **Interaction:** Tap > Full-screen QR code modal
- **Full-screen experience:**
    - QR code

AI-Powered Assistance

Voice-to-Data:

- Any task supports voice notes
- AI transcribes and extracts structured data
- Example: "Bartender loved it, wants signature cocktail". Logs: Engagement=Positive, Opportunity=Signature_cocktail

Smart Notifications (contextual based on event progress): For example

- "20 minutes without consumer sample - staying busy?"
- "10 sales short of target - 30 minutes left!"

Check-Out Requirements

- Button disabled until all Required tasks complete
- Shows checklist: "Complete 2 more tasks to check out"
- Geolocation verified at check-in AND check-out

3.4 Post Event Details

- **Assumption:** Once 24 hours have passed event moves from 'Upcoming' to 'Past' in navigation &, a user can no longer edit past events or when a Manager has 'finalised' the event.
- **Elements:** Event Name, Location, Time & Date, Basic stats (consumers, sales), Notes, Gallery of Photos, Compensation details

4. Settings

- **Elements:** Profile, Help, Notifications, Geolocation, Biometrics, Logout CTA
- **Functionality:** Selecting Notifications, Geolocation & Biometrics brings up the native device settings to enable/disable these features.
    - Profile - Name, Email, Profile Photo, Password + change password link. User can edit any of these fields
        - Changing Password link asks the user to confirm old password & new password x 2
        - User automatically logged out and asked to log back in if password changes
    - Help - FAQs will be collapsible question & answers as configured by Client staff team.
    - Logout - Link logs the user out of the app

5. Offline mode

5.1 Full offline functionality:

- Events opened previously will be cached locally so they can be viewed offline
- Check-in/check-out (timestamps cached locally)
- Data & Notes (saved locally)
- Data will auto-sync when user is online, will retry if there are any failures

5.3 **Offline indicators**:

- Banner at top: "Working Offline - Will sync when online"
- Upload photo functionality inactive until online (user can take photos on their phone and upload after the fact)
- "Syncing..." state when connection restored

EDUCATOR MANAGERS

1. Authentication

1.1 Activate account

- **Assumption:** A manager cannot register for the platform. They have to be invited via email by an Ops Team member.
- **Flow:** User receives invitation email with activation link > link directs to web platform
- **Elements:** Email field (pre filled from invitation), password field, confirm password, activate account button
- **Functionality:** Valid email format required, password security requirements, passwords must match, error message displayed if requirements are not met.

1.2 Sign in

- **Elements:** Email field, Password field, "Forgot Password?" link, Sign In button
- **Functionality:** Valid email & correct password accepted otherwise error message will display

1.3 Forgot Password

- **Elements:** Email field, "Send Reset Link" button
- **Next:** User receives email and redirected back in platform
- **Elements:** New password, confirm password
- **Functionality:** Valid emails accepted, password should have basic security measures + password matching, if requirements are not met, error message will display
- **Next:** Sign in Screen (see above)

2. Navigation

- **Assumption**: When an Educator Manager first logs in, they land on the Dashboard (homepage)
- **Side Navigation**: Dashboard (default/active on login), Events, Educators, Settings
    - Events: View all events assigned to them, filter and search capabilities
    - Educators: List of educators assigned to them, performance metrics
    - Settings: Profile, Notification Preferences, Help & Support, Logout
    - **Dashboard**: Quick stats, upcoming events, recent educator activity
- **Future-Proofing Note**: Navigation designed to accommodate additional sections as platform grows (e.g., Reports, Analytics, Training Management)

3. Dashboard (Homepage)

- **Assumption:** Dashboard displays real-time data for the Educator Manager's assigned events only
- **Elements:** Stat Cards: Total Events This Week, Active Events Now, Events Requiring Attention
- **Functionality**
    - Each stat card is clickable and filters the the list of events
    - Each event card is clickable that navigates the user to that event page

4. Events

- **Assumption:** List of events will display live events at the top of the list, followed by upcoming then completed events. This section is scrollable
- **Top Navigation Elements:** Search bar, All events, Live events, Upcoming Events, Completed Events, List view & Calendar view (toggle)
- **Event Card:** Event Name, Location, date/time, assigned educator
- **Functionality**
    - Clicking on any of the top navigation filters the list of events below the fold
    - Using the search bar filters the list of events based on the search item
    - Clicking the calendar view changes the screen to show a monthly calendar view with events in the corresponding dates. User can navigate forwards & backwards
    - Clicking on an event card directs the user to event details

5. Event Details

Assumption: Managers and Educators will communicate outside of the platform regarding availability.

- **Always available Elements**
    - Event Name, Location, date/time & educator assigned
- **Pre-Event Elements**
    - Product Section: Product Images & details
    - Event Instructions: Setup, Parking, Wifi
    - Event Kit/Materials; Pickup details, list of materials required
    - Event Goals: Number of samples/sales/focus area
    - Compensation: Pay rate, event duration
- **During-Event Elements**
    - Event Name, Location, date/time & educator assigned
    - Checkin timestamp
    - Real time Inventory & Sales data
    - Real time number of Consumer Questionnaires completed
    - Real time Notes
    - Real time Photo Uploads
- **Post-Event Elements**
    - Event Name, Location, date/time & educator assigned
    - Pre & Post event inventory & Sales data
    - Final number of questionnaires completed
    - Notes
    - Photos uploaded (receipts & social)
    - Approve & Finalize CTA
- **Functionality**
    - If unassigned educator; clicking educator brings up list of educators and manager can add 1+ educators to the event.
    - If assigned educator; Educator name & photo, contact info, "Reassign" button
        - Reassign button brings up same list of educators available
    - Clicking approve finalises the event and updates the status for the event overall (Educators, Managers, Ops & Client)

5. Educators

5.1 Educators List view

- **Elements:** Educator card (Name, contact details, next event, number of events assigned), filter bar (all, active, inactive), search bar, sort drop down (events completed, name, ratings)
- **Functionality**
    - Clicking on an educator will bring up Educator Detail View

5.2 Educator Detail View

- **Elements**
    - **Header**: Educator photo, name, contact info (phone, email with mailto link), status indicator, "Edit Educator" button
    - **Quick Stats:** Total Events completed, number of events this month, average rating, average sales per event
    - **Upcoming Events:** List of upcoming assigned events
- **Functionality**
    - Edit educator allows manager to update educators contact details only
    - Clicking on any event card redirects the user to Event Details Page

6. Settings

6.1 Account

- **Elements**:
